

## Introduction

### Chapter 1:

- 1.1 Physics performance requirements ([A.Deshpande](#), R.Milner)
- 1.2 General accelerator concept and parameters ([V.Ptitsyn](#), T.Roser, [MIT](#))

### Chapter 2: Electron beam

- 2.1 Design Concepts ([C.Tschalaer](#))
- 2.2 Geometry and Location at the BNL Site ([D.Trbojevic](#), S.Tepikian)
- 2.2 Injector Accelerator ([T.Zwart](#))
  - 2.2.1 Polarized Electron Photoinjector ([M.Farkhondeh](#), W.Franklin)
  - 2.2.2 Linac ([T.Zwart](#), A.Zolfagari, W.Graves, [BNL](#))
  - 2.2.3 Recirculator and Transport Lines ([J.van der Laan](#), [BNL](#))  
*Multi turn acceleration (FFAG). (D.Trbojevic).*
  - 2.2.4 Positron Beam ([T.Zwart](#), F.Wang, J.van der Laan)
- 2.3 Electron ring ([F.Wang](#))
  - 2.3.1 Luminosity Considerations ([F.Wang](#))
  - 2.3.2 Lattice Design ([F.Wang](#), D.Wang; S.Tepikian, V.Ptitsyn)
  - 2.3.3 Chromaticity and Dynamic Aperture ([F.Wang](#), A.Otboev)
  - 2.3.4 Current limits, instabilities ([F.Wang](#), D.Wang, J.van der Laan; [M.Blaskiewicz](#)).
  - 2.3.5 Beam Polarization ([D.Barber](#), D.Wang, T.Zwart)
  - 2.3.6 RF System ([A.Zolfaghari](#), [BNL](#))
- 2.4 Important Technical Issues ([J.van der Laan](#))
  - 2.4.1 The Arc Magnets and Vacuum Chambers ([D.Wang](#), M.Farkhondeh, J.van der Laan, [Ihloff](#))  
*SR power accommodation([C.Montag](#), [D.Hseuh](#) )*
  - 2.4.2 Electron Spin Optimization ([MIT](#), [DESY](#))
  - 2.4.3 *Electron Polarimetry ([MIT](#), [U. Michigan](#) , [BNL](#))*

### Chapter 3: Ion beam

- 3.1 Luminosity Issues ([V.Ptitsyn](#))
- 3.2 Ion Beam cooling
  - 3.2.1 Electron cooling ([I.Ben-Zvi](#))
  - 3.2.2 *Stochastic cooling ([M.Brennan](#))*
- 3.3 Increasing number of bunches ([W.Fischer](#), [S.Y.Zhang](#))  
*Injection upgrades*  
*Pressure rise/ Electron Cloud*
- 3.4 Instabilities ([M.Blaskiewicz](#))

### 3.5 Beam Polarization Issues ([W.MacKay](#))

3.5.1 Acceleration of polarized protons

3.5.2 Polarized  $^3\text{He}$  acceleration.

3.5.3 Hadron Polarimetry

## Chapter 4: Interaction Region Design

### 4.1 The Interaction Region Design Optics ([V.Ptitsyn](#)) (*Expert help: B.Parker*)

*Directing the synchrotron radiation outside of the magnets and detectors.*  
([C.Montag](#), [V.Ptitsyn](#))

*Vertical separation of the RHIC two rings - dispersion matching*  
([S.Tepikian](#), [D.Trbojevic](#))

*IR Corrections* ([F.Pilat](#))

*Input from electron ring* ([D.Wang](#))

### 4.2 Detector interface ([B.Surrow](#), [A.Deshpande](#))

### 4.3 Spin Rotators

4.3.1 Electron Spin Rotators ([BINP](#), [D.Barber](#))

4.3.2 Proton Spin Rotators ([W.MacKay](#))

### 4.4 IR polarimeter ([MIT](#), [U. Michigan](#) , [BNL](#))

## Chapter 5: Project Planning

### 5.1 Site Considerations ([BNL](#))

### 5.2 Cost Estimates

5.2.1 Electron Complex ([MIT](#), [BNL](#))

5.2.2 Ion Complex ([BNL](#))

5.2.3 Interaction Region(s) ([BNL](#))

5.2.4 Detectors ([BNL](#), [MIT](#))

### 5.3 Project Management ([BNL](#), [MIT](#))

**Appendix A:** Linac-Ring option ([I.Ben-Zvi](#), [J.Kewisch](#), [V.Litvinenko](#))

**Appendix B:** Self-Polarizing e-Ring option ([Yu.Shatunov](#), [V.Ptitsyn](#))

**Appendix C:** Consideration of Multiple Interaction Regions ([R.Milner](#), [A.Deshpande](#))
